IN THE SPECIFICATION

Please amend paragraph [0121] as follows:

[0121]   The present invention can be realized as computer-executable instructions in computer_readable media. The computer_readable media includes all possible kinds of media in which computer_readable data is stored or included or can include any type of data that can be read by a computer or a processing unit. The computer_readable media include for example and not limited to storing media, such as magnetic storing media (*e.g.*, ROMs, floppy disks, hard disk, and the like), optical reading media (*e.g.*, CD_ROMs (compact disc-read-only memory), DVDs (digital versatile discs), re-writable versions of the optical discs, and the like), hybrid magnetic optical disks, organic disks, system memory (read-only memory, random access memory), non-volatile memory such as flash memory or any other volatile or non-volatile memory, other semiconductor media, electronic media, electromagnetic media, and infrared, and other communication media such as carrier waves (e.g., transmission via the Internet or another computer). Communication media generally embodies computer-readable instructions, data structures, program modules or other data in a modulated signal such as the carrier waves or other transportable mechanism including any information delivery media. Computer-readable media such as communication media may include wireless media such as radio frequency, infrared microwaves, and wired media such as a wired network. Also, the computer_readable media can store and execute computer_readable codes that are distributed in computers connected via a network. The computer readable medium also includes cooperating or interconnected computer readable media that are in the processing system or are distributed among multiple processing systems that may be local or remote to the processing system.

-2-

The present invention can include the computer-readable medium having stored thereon a data structure including a plurality of fields containing data representing the techniques of the present invention.

-3-
